

Project #11: Teacher Web Page

The assignment for this lesson is to create a teacher website. If you already have a teacher website, you may modify or enhance it in some way.

Create a New Teacher Website

First, choose a service that creates a teacher website for you. You may use [Google Sites](#), [Weebly](#), [Wix](#), or any other service you prefer. Each of these services requires you to have an account. For example, if you are using Google Sites you must have a Google account. Once you have chosen a service, follow the instructions to create a basic website for your classroom or teaching assignment. Make sure your website meets these minimum criteria, but you may exceed them if you like:

- There should be at least 2 individual pages which are linked.
- One of the pages should have at least 5 images, embedded movies, or audio.
- There should be at least 4 hyperlinks to web resources.
- Hyperlink your e-mail address on your page.
- There should be a navigation tool to move within the webpage. (Usually a navigation bar or menu is created automatically by the service you use.)
- All links MUST work.

Modify an Existing Teacher Website

If you already have a teacher website such as a school website, work with your instructor to make updates or improvements to your website. Make sure you receive approval before you begin making changes.

Submissions

Submit the URL of your website to the dropbox via a word processing document. If you choose to modify an existing website, include in your word processing document a short description (1-2 paragraphs) of the changes you made.
